

Factors surrounding the use of FES technology in the home environment for sedentary populations in Australia: A semi-structured interview study

Are you:

- Aged over 18?
- Have a **spinal cord injury**, or **multiple sclerosis**?
- **Have, or are currently using, Functional Electrical Stimulation (FES) technology for exercise at home?**

If so, you may be eligible to participate in a study looking at FES technology in the home environment. The study is a **mixed-methods study**, involving a **face-to-face interview** and a **survey**.

It is being conducted as part of Mr Matthew Taylor's PhD project in biomedical engineering at the University of Sydney.
